

TODOs

- For each category create debate AI group
 - Expose the debate group via Ollama for API access

In progress

- Add all Upstreams supported: GitLab, GitFlic, Gitee, GitVerse
- Cover all models by all supported Builder categories
- Fixers: Support for Goose
- Fixers: Auto detection between AI CLIs sorted by priority - claude, goose, qwen, etc
- Web UI for tasks with APIs (instead of manual editing). After we create or edit task submit with confirmation sends it to execution to the AI
- Recipes for adding more tests (each test scenario is defined by the recipe)

Completed

- FIXME: Audio model for 7B does not exist on Ollama
- Make sure that every model before it is installed is checked if exists in Ollama, as fallback pull it and apply from Hugging Face
- TASK: [003 Testing Scripts](#)
- FIXME:

```
✗ python3 Scripts/AudioTemplates/text_to_speech.py 'Hello, this is a test'
Traceback (most recent call last):
  File "Builder/Scripts/AudioTemplates/text_to_speech.py", line 10, in
<module>
    import soundfile as sf
ModuleNotFoundError: No module named 'soundfile'
```

- Command for CLI AI has to be customizable with the def. val. and to run in headless mode
- Fixers: Add support for multiple **Fixers** - Besides **Claude** add **Qwen** as option/default one
